

Mathematical Biosciences

Mathematical Biosciences is abstracted or indexed in Applied Mechanics Review, Biological Abstracts, CABS/Current Awareness in Biological Sciences, Chemical Abstracts, Current Contents, Engineering Index, Excerpta Medica, INSPEC, International Abstracts of Biological Sciences, Mathematical Reviews, and Medicus/MEDLINE.

Volume 166

Y. Wang and E. Pollak, The effective number of a population that varies cyclically in size. I. Discrete generations	1
Y. Li, G.F. Yeo, R.K. Milne, B.W. Madsen and R.O. Edeson, Burst properties of a supergated double-barrelled chloride ion channel	23
S.E. Chick, A.L. Adams and J.S. Koopman, Analysis and simulation of a stochastic, discrete-individual model of STD transmission with partnership concurrency	45
S. Holte and M. Emerman, A competition model for viral inhibition of host cell proliferation	69
K. Skouibine, N. Trayanova and P. Moore, A numerically efficient model for simulation of defibrillation in an active bidomain sheet of myocardium	85
R.R. Poznanski and J. Bell, A dendritic cable model for the amplification of synaptic potentials by an ensemble average of persistent sodium channels	101
R.R. Poznanski and J. Bell, Theoretical analysis of the amplification of synaptic potentials by small clusters of persistent sodium channels in dendrites	123
S.M. Berman, A stochastic-covariate failure model with an application to case-control analysis	149
H.R. Thieme, Uniform persistence and permanence for non-autonomous semiflows in population biology	173
